PROFESSIONAL SUMMARY

Senior .NET developer focused on backend services and developer platform modernization. Led a source control migration off TFVC to Git across 60+ .NET projects, rebuilt the deployment pipeline to cut release times by 90%, and designed services that reduced database storage by 38%. Consistently identifies process gaps, pitches the fix, and owns it from architecture through production.

EXPERIENCE

Auto-Owners Insurance

Aug 2022 – Present

Senior Software Developer (Aug 2025 – Present) • Software Developer (2023 – 2025) • Associate Software Developer II (2022 – 2023)

- Led enterprise-wide source control migration from Team Foundation Version Control to Git for an affiliate IT department: migrated 60+ .NET projects and services, built new Azure Pipelines, and established a formal code review process.
- Created a DevOps enablement role to modernize the development experience: converted classic Azure DevOps pipelines to YAML, implemented PR build validation pipelines, and currently leading the move of SQL databases into source control.
- Implemented CI/CD with Azure Pipelines, reducing deployment times from 10 minutes to under 2 minutes (90%) and eliminating recurring configuration issues.
- Sole developer on an Archive & Purge microservice that identifies and deletes expired policies, reducing database storage by 38%.
- Sole developer on a service-layer refactor (.NET) replacing direct database references across the codebase with service calls, decoupling applications from the data layer (SQL).
- Selected to research and pilot the integration of AI tooling into department development processes.
- Collaborated across companies to implement a new insurance quoting workflow for all agents, and volunteered to backfill a departed team member on a JavaScript SaaS application upgrade.

AvaSure

Feb 2018 – Aug 2022

Software Engineer in Test (Apr 2022 – Aug 2022) • SDET Co-op (Feb 2018 – Apr 2022)

- Pitched, designed, and built a .NET service to schedule and coordinate automated test execution across shared servers, including a concurrency algorithm to load-balance and sequence tests and a database to track test state.
- Automated the creation, closing, and tracking of Jira bug tickets from test results, eliminating a manual QA workflow.
- Built a tool and database to parse, version, and track project requirements, ensuring each software version was tested against the correct requirement set and replacing an error-prone manual process.
- Developed a React website for QA teams to record manual pass/fail results and visualize testing statistics and progress; supplemented with a suite of SSRS reports covering resource usage, discrepancies, and coverage.

SKILLS

Languages: C#, SQL (T-SQL), JavaScript, TypeScript, HTML/CSS

.NET & Backend: .NET / .NET Framework, ASP.NET, Entity Framework, REST APIs, Microservices, SQL Server, NoSQL

Testing: xUnit, Selenium, automated integration and UI testing

DevOps & Cloud: Azure, Azure DevOps, Azure Pipelines (YAML), CI/CD, Git, Automated Testing

Frontend: React, Next.js, Node.js

EDUCATION

Grand Valley State University

Bachelor of Science in Computer Science

2022
